**Subject:** RE: Targeted Sampling Report 2017

It is explaining DATCP's purpose for sampling groundwater in Wisconsin and how they have revised their sampling to revisit homes that they have already tested to see if the water quality is getting better or worse.

Cheryl Burdett

I don't really know what this is, but Stenger sent it to me.

Nice speaking with you today Charles. Nitrate contamination from non-point sources (ie. agricultural field use) is one of the biggest issues for groundwater contamination in our State. That said, I'm hopeful that something good comes out of the monitoring EPA is performing up in Juneau and Wood Counties. In my experience, homeowners are frustrated up there, just as they are in other areas of the state as well.

Our Targeted Sampling report for last year is attached. It will give you an idea of the results we are seeing in wells we test around the State.
